INTERIM REPORT QUARTER 3 2021

FINANCIAL EVENTS

Third quarter

- ◆ Net sales amounted to MSEK 0.1 (0.0)
- ◆ Operating profit/loss (EBIT) totaled MSEK -8.0 (-8.0)
- ◆ Cash flow from operating activities amounted to MSEK -3.7 (-6.6)
- ◆ Earnings per share before and after dilution amounted to SEK -0.05 (-0.11)

Year to date January– September

- ◆ Net sales amounted to MSEK 0.2 (0.1)
- ◆ Operating profit/loss (EBIT) totaled MSEK -24.0 (-25.3)
- ◆ Cash flow from operating activities amounted to MSEK -21.8 (-25,8)
- ◆ Earnings per share before and after dilution amounted to SEK -0.24 (-0.32)

SIGNIFICANT EVENTS

Third quarter

- ◆ SaltX in cooperation agreement with ABB regarding control systems

DURING THE SUMMER AND AUTUMN, ONE HALF OF THE SYSTEM WAS COMMISSIONED (DISCHARGING), AND THE OTHER HALF OF THE PLANT (CHARGING) IS NOW IN THE PROCESS OF BEING COMMISSIONED. IN THE NEXT STEP, TESTING PROGRAMS WILL BE CARRIED OUT.

READ MORE IN THE REPORT FROM THE TEST FACILITY IN STOCKHOLM ON PAGE 8

KEY FIGURES

Group, TSEK	Q 3 2021	Q 3 2020	YTD Sep 2021	YTD Sep 2020	FY 2020

Equity ratio (equity/balance sheet total)	76%	73%	76%	73%	70%

THE CEO'S ADDRESS

Environmental issues and the transition of the energy industry are currently dominating industry and power company news flows. The need for different energy storage facilities is escalating and it is becoming increasingly clear that they, partnered with fossil-free energy sources, are becoming the "new standard".

If we are to achieve the challenging climate goals we are facing in the world, it is important that we work to help each other in every conceivable way.

We are now focusing on completing the pilot plant in Stockholm by the end of the year. The plant is important for ensuring parameters and verifying the interaction between nanocoated salt and the reactors. Together with Sumitomo SHI FW in 2020, we drew and designed a discharge reactor based on fluidization technology. Between October 2020 and the summer of 2021, we manufactured and installed the reactor and other necessary peripheral equipment. The discharge reactor is now ready and is being tested according to our program.

CHARGING REACTOR NOW IN PLACE

The charging reactor from Calix Ltd recently

arrived at the plant, was assembled, and will soon be put into operation. This reactor technology is based on material falling through a high and extremely hot pipe. This type of reactor solution offers technological and large-scale validation and is an important milestone in our company's development. We are using our expertise to construct the technology that will be the foundation of and reference for large future installations at megawatt level. We look forward to performing test runs once the facility is completed.

IMPORTANT POSSIBILITIES FOR MINING AND STEEL INDUSTRY

We are in the process of doing preliminary studies for our next test facility, this time in the city of Luleå, an important hub for the Swedish mining and steel industry, which is undergoing major transformation. This preliminary study is important for our

"THE NEED FOR DIFFERENT ENERGY STORAGE FACILITIES IS INCREASING AND IT IS BECOMING INCREASINGLY CLEAR THAT ENERGY STORAGE FACILITIES ARE BECOMING THE 'NEW STANDARD'."

plan to use excess heat generated during steel production to charge our nanocoated salt. Due to the importance and difficulty of this feasibility study, we have initiated a strategic partnership with Swerim, an industry-owned research organization. The companies LuleKraft and Luleå Energi also see the significant saving opportunities SaltX's energy storage facility offers them by helping to cut down oil consumption in the long term. Once the structured feasibility study is completed, we will decide in consultation with Swerim on the best way forward.

INTEREST IN CHINA GROWS

The need for energy storage is global and large markets are facing major changes. In particular, China is facing the major challenge of phasing out coal and replacing it with fossil-free energy sources. Together with Shuangliang, we are currently discussing different forms of collaboration for identifying a test facility at a customer's premises. The test facility that Shuangliang has

designed and is building, is still being prepared for trials and test runs.

SEVERAL IMPORTANT PARTNERSHIPS

If we are to achieve the challenging climate goals we are facing in the world, it is important that we work to help each other in every conceivable way. Our partnerships with Calix (charging reactor), Sumitomo SHI FW (discharge reactor) and ABB (control system) are part of the work to transform to a fossil-free society. It is important to be able to control and monitor all input parameters in this process to maximize efficiency, etc. Collaborating with ABB gives us the best possible quality-assured solution. I can happily confirm that our collaboration with these partners is now more frequent and far-reaching. In addition to these partners, we have ongoing discussions with a number of important and interesting new partners who will be able to make positive contributions.

THE WIN IN HELSINKI OPENS DOORS

Local energy companies, both in Sweden and abroad, have major challenges in reducing their environmental impact and choosing energy-efficient solutions for the future. An important aspect is that customers often

Carl-Johan Linér, CEO

"I CAN HAPPILY CONFIRM THAT OUR COLLABORATION WITH THESE PARTNERS IS NOW MORE FREQUENT AND FAR-REACHING."

want to use or retain existing infrastructure in the transition, which our solution makes possible. After our participation in the Helsinki Energy Challenge (read more in our previous quarterly report), where we came out one of the winners, we and new and potential customers learned of the opportunities offered by creating sustainable cities through energy storage facilities while maintaining and utilizing existing infrastructure. We use what we learned in our daily discussions with new partners and potential customers.

We are delighted with the increasing interest and commitment in en-

ergy storage as well as in our technology, which is natural given the energy transition that must occur in society. We will continue to focus primarily on "Power to Heat" (PtH) and "Heat to Heat" (HtH) applications with the ambition of gradually increasing energy storage capacity for each new plant we build.

Thank you for your time and the confidence you show in SaltX's development of a stable, technical and sustainable solution that will contribute to making the very important transition to fossil-free energy use.

Carl-Johan Linér CEO
Stockholm,
November 2021

SALT X OPERATIONS

The SaltX business concept is to develop and offer sustainable technology that will benefit customers, the climate and society. SaltX is currently developing a large-scale energy storage facility that uses a patented nanocoated salt material and is cooperating with various types of partners who promote technology, material, and application development.

The energy transition with an increased proportion of weather-dependent power generation requires large-scale energy storage to meet requirements on continuous energy supply. SaltX's innovation, built using nanocoated salt material, is a circular thermo-chemical storage solution that provides energy when needed to various energy players and industrial customers.

SALT X THERMO-CHEMICAL ENERGY STORAGE: ENERSTORE

SaltX systems are based on scalable industrial components and technology that have been used in the energy, process, and chemical industries for many decades. SaltX has adjusted and optimized this technology and uses it in a new fundamental way in conjunction with important innovations – such as nanocoated salt material. By using proven technology, the process of

commercialization is easier and less risky.

SALT X ENERSTORE IN BRIEF

The energy is stored by adding high-temperature heat, approx. 500°C. In simple terms, the salt is dried, and as the salt is dry, it contains a stored potential energy. To release the energy, water vapor is added to the salt, a strong chemical reaction occurs, and all the energy used to dry the salt returns in the form of 450-degree steam. The salt can be loaded with heat, electricity and gas depending on the area of application. The energy can be stored for hours, days or weeks – and then used when needed.

THREE AREAS OF APPLICATION

The SaltX energy storage solution, EnerStore, is suitable for three different areas of application:

HEAT TO HEAT

Recharge with heat and get

THE ENERGY CAN BE STORED FOR HOURS, DAYS OR WEEKS — AND THEN USED WHEN NEEDED.

heat back to the industry at the right time. Industries with large emissions of waste heat, for example, can optimize their processes by charging energy storage with this waste heat. SaltX nanocoated salt is also easy to move geographically, which enables the discharge of surplus energy elsewhere, such as in cities as a complement to biofuel.

POWER TO STEAM

Cities and industries that require high-temperature steam can store electricity and then generate steam for the district heating network or industry. This enables customers who place high value on a reliable supply of energy to implement and make wider use of solar and wind power.

POWER TO POWER

SaltX thermo-chemical energy storage can also be used and acts as a large-scale electric battery. It is charged with a heat pump and generates electricity from stored heat via a heat engine. Among other things, this type of large electrical energy storage facility solves output and

capacity challenges for grid owners, electricity companies, cities, and countries.

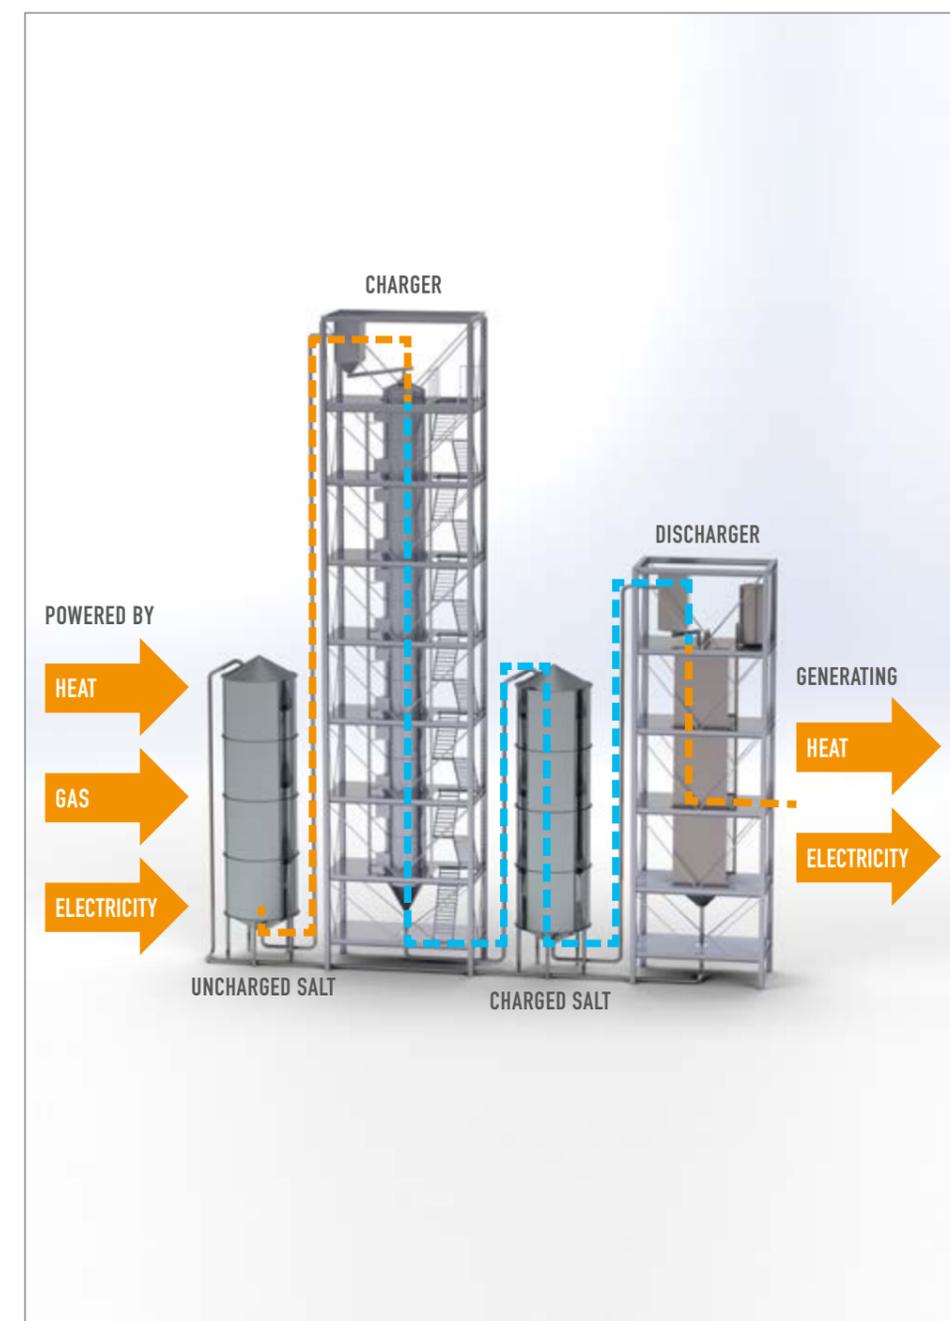

SALT X PARTNERS & ECOSYSTEM

SaltX collaborates with partners in the development of technology, materials, and applications. Depending on the market and end use, these partners may differ, but mainly have four different functions. They are salt suppliers that prepare and process nanocoated salt, OEMs (Original Equipment Manufacturer) that manufacture key components, EPCs (Engineer, Procure, Construct) that install energy storage systems, and finally, end customers.

SALT X TODAY

The next step in the development into a commercial product is to build additional test facilities, pilots, and pre-commercial facilities to ensure the technology reaches the market. SaltX strives to become a major player in terms of green and sustainable technological development.

SALT X STORES THERMAL ENERGY

REPORT FROM THE STOCKHOLM PILOT

SaltX's new pilot plant shows that functioning renewable energy storage is within reach

Not a day passes without news feeds containing environmental reports or news about the negative state of our planet. We humans have become dependent on fossil fuels that leave harmful emissions behind. These emissions have resulted in extreme weather, global warming, and low water levels. There is a tug-of-war between the environment and industry that does not need to exist. Many new initiatives and proposals for solutions

are also born from the critical situation in which our climate is in. These will help get the environment and industry to work together and switch to renewable energy.

SALT X MAKES THE TRANSITION COST EFFICIENT

SaltX is contributing to the transition by developing a technology for energy storage. Because the process is independent of time, excess renewable energy can be stored and then be used when need-

THIS SCALABLE SOLUTION MAXIMIZES THE USE OF RENEWABLES AND REDUCES THE COST OF THE ENTIRE ENERGY TRANSITION.

ed. This scalable solution maximizes the use of renewables and reduces the cost of the entire energy transition.

In 2019 SaltX carried out a pilot project in Berlin where it was proven that their technology could be used to store energy from renewable sources. A new pilot plant is now being built in Stockholm with a new, optimized technology for charging and discharging salt energy. This will enable it to be scaled up to larger megawatt-sized plants and then to store energy for cities or indus-

tries. The end of installation is in sight after about a year of design, development, and assembly.

REUSE IN LARGE SCALE

The new pilot plant combines well-utilized concrete floors and 20-meter shafts (so deep that it is dizzying to stand at the railing and look straight down) with a reactor that is in the SaltX bright blue and other shimmering equipment that can charge salt using renewable energy. Also important to the transition is being capable of taking advantage of already existing infrastructure. Therefore, the large-scale Stockholm plant is being built on a site previously used for burning oil for district heating. SaltX has thus succeeded in reusing some of the equipment that was available from the previous business, such as using pipes that previously transported oil to transport nanocoated salt.

During the summer and autumn, one half of the system was commissioned (discharging), and the other half of the plant (charging) is now in the process of being commissioned. In the next step, testing programs will be carried out.

PARTNERSHIP STRENGTHENS

Enabling the discharge process, global technology provider Sumitomo SHI FW is an important partner. This and the sev-

eral subsupplier collaborations have resulted in the discharge processor now being in place. The Australian company Calix Ltd is also an important partner. Together with SaltX, they have developed a charging reactor to optimize the energy storage solution using scalable technology.

SAVED ENERGY FOR WHEN IT IS NEEDED

When this method is

complete, we will start to see that bulk trucks on the roads are carrying loaded salt rather than coal and oil. The SaltX technology makes it possible to store, transport and use renewable energy in other locations than where it was produced. SaltX has shown and will continue to show that the transition from fossil fuels is not only possible, but within reach.

[SEE THE INTERVIEW WITH CARL-JOHAN LINÉR HERE](#)

SIGNIFICANT EVENTS

...IN THE THIRD QUARTER

SALT X IN COOPERATION AGREEMENT WITH ABB STRENGTHENS THE TECHNICAL PLATFORM WITH SYSTEM FOR AUTOMATION AND CONTROL

SaltX Technology has signed a letter of intent with ABB regarding cooperation in systems for automation and control processes to strengthen the technical platform of EnerStore. The companies will jointly ensure a stable and scalable control system. ABB has a long and solid experience in complex control systems and will be able to contribute to optimizing and securing the control system in both the short and long term for the energy storage system of SaltX.

FINANCIAL OVERVIEW

JULY — SEPTEMBER QUARTER 3 2021

REVENUE, EXPENSES AND EARNINGS

Net sales

Net sales for the quarter amounted to TSEK 103 (5). The revenue is for the first part of a project for a pre-study.

Capitalized expenditure for development work

Balanced development expenses amounted to TSEK 7,779 (—) in the quarter and relate to the development and construction of a pilot with new reactor technology based on fluidization.

Other income

Other income in the quarter totaled TSEK 7 (1).

Expenses

Expenses during the quarter amounted to TSEK 15,888 (7,970), broken down as other external expenses TSEK 10,215 (2,629), personnel costs TSEK 4,113 (3,800), and depreciation of fixed assets TSEK 1,560 (1,541). The increase in external costs is attributable to increased project costs for the above-mentioned pilot plant for the new reactor technology.

Operating profit/loss (EBIT)

Operating profit/loss was TSEK -7,999 (-7,964).

Financial items

Profit/loss from financial items amounted to TSEK 2,667 (-1,403) and consisted of interest on liabilities to the Swedish Energy Agency and Almi Företagspartner, as well as on leasing liabilities. The interest rate on these liabilities is around 6 percent. Changes in the fair value of the shares in Central Development Holdings Ltd are also included. This was positive in the quarter at TSEK 3,112 (-901).

Profit/loss before tax

Profit/loss before tax was TSEK -5,332 (-9,367).

Earnings per share before and after dilution amounted to SEK -0.05 (-0.11).

CASH FLOW, INVESTMENTS AND FINANCIAL POSITION

Cash flow and liquidity

Cash flow from operating activities during the quarter was TSEK -3,658 (-6,584).

Group cash equivalents at the end of the quarter amounted to TSEK 67,448 (54,701).

Long-term liabilities

Long-term liabilities amounted to TSEK 27,893 (30,696)

and consisted of loans from the Swedish Energy Agency of TSEK 24,386 and from Almi Företagspartner of TSEK 2,100, as well as long-term leasing liabilities of TSEK 1,407.

The loan from Almi is amortized monthly over a period of 5 years.

Investments

During the quarter, investments were made that impacted cash flow in the amount of TSEK -7,349 (-120). These consisted of capitalized expenditure for the development of a pilot plant with a fluidized bed reactor. Capitalized expenditures have been reduced in the quarter with the grant from Swedish Energy Agency with TSEK 767. Cash flow also includes ongoing investments in new patents, including patent applications in additional markets.

Equity

At the end of the quarter equity amounted to TSEK 127,761 (104,052) or SEK 1.24 (1.18) per share and has increased through an issue of shares in May this year. The equity ratio on the same date was 76 (73) percent.

DEVELOPMENT PER QUARTER

TSEK	Q 3 2020	Q 4 2020	Q 1 2021	Q 2 2021	Q 3 2021
Net sales	5	—	9	52	103
Operating profit/loss (EBIT)	-7,964	-8,101	-8,121	-7,923	-7,999
Cash flow from operating activities	-6,584	-6,750	-7,778	-10,317	-3,658
Basic earnings per share, SEK	-0.11	-0.10	-0.11	-0.08	-0.05

JANUARY — SEPTEMBER 2021

REVENUE, EXPENSES AND EARNINGS

Net sales

Net sales for the period amounted to TSEK 164 (94).

Capitalized expenditure for development work

Balanced development expenses amounted to TSEK 16,145 (—) in the period and relate to the development and construction of a pilot with new reactor technology based on fluidization.

Other income

Other income in the period totaled TSEK 1,180 (826).

Expenses

Expenses during the period amounted to TSEK 41,532 (26,211), broken down as other external expenses TSEK 22,871 (9,218), personnel costs TSEK 14,022 (12,395), and depreciation of fixed assets TSEK 4,639 (4,598). The increase in external costs is attributable to increased project costs for the above-mentioned pilot plant for the new reactor technology.

Operating profit/loss (EBIT)

Operating profit/loss was TSEK -24,043 (-25,291).

Financial items

Profit/loss from financial items amounted to TSEK 1,152 (-2,266) and consisted of interest on liabilities to the Swedish Energy Agency and Almi Företagspartner, as well as on leasing liabilities. The interest rate on these liabilities is around 6 percent. Changes in the fair value of the shares in Central Development Holdings Ltd are also included. This was positive in the period at TSEK 2,575 (-735).

Profit/loss before tax

Profit/loss before tax was TSEK -22,891 (-27,557).

Earnings per share before and after dilution amounted to SEK -0.24 (-0.32).

CASH FLOW AND INVESTMENTS

Cash flow and liquidity

Cash flow from operating activities during the period was TSEK -21,753 (-25,758).

Investments

During the period, investments

were made that impacted cash flow in the amount of TSEK -13,482 (-585). These consisted of capitalized expenditure for the development of a pilot plant with a fluidized bed reactor. Capitalized expenditures have been reduced with the grant from Swedish Energy Agency with TSEK 3,579. Cash flow also included ongoing investments in new patents, including patent applications in additional markets.

PARENT COMPANY

The operations of the parent company, SaltX Technology Holding AB (publ), include Group-wide services, management of the subsidiary SaltX Technology AB, and maintenance of the company's listing on Nasdaq First North Premier Growth Market.

Profit/loss before tax for the period January – September was TSEK -4,042 (-5,791). On September 30, the parent company held available liquid assets amounting to TSEK 60,964 (53,202).

SHARE CAPITAL

Share capital at the end of the period amounted to SEK

8,234,958.72 consisting of 102,936,984 shares at a nominal value of SEK 0.08. The share capital increased in May by SEK 1.2 million and the number of shares by 15 million shares through a directed issue.

SHARES

Shares in SaltX are listed on Nasdaq First North Premier Growth Market.

Earnings per share

Earnings per share for the period amounted to SEK -0.24 (-0.32) based on an average of 95,436,984 (87,084,678) shares, before dilution. When calculating the number of shares after full dilution, the additional outstanding shares from warrant programs issued were considered. However, this did not have any effect since the result was negative.

Significant risks and uncertainties

All business operations and share ownership are associated with risk. Risks that are managed well can entail opportunities and the creation of value, if not, they can lead to damage and losses. The risks can be divided into market-related, operations-related, and financial risks.

See also the company's Annual Report on its website.

Accounting policies

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) such as they have been adopted by the EU, RFR 1 Sup-

plementary Accounting Rules for Groups, and the Swedish Annual Accounts Act. The Interim Report has been prepared in accordance with IAS 34 Interim Financial Reporting.

The parent company's financial statements have been prepared in accordance with the Swedish Annual Accounts Act and the Swedish Financial Reporting Board's recommendation RFR 2 Accounting for Legal Entities. The application of RFR 2 means that, in the interim report for the legal entity, the parent company applies all the IFRS, and statements adopted by the EU as far as this is possible within the framework of the Swedish Annual Accounts Act, the Swedish Pension Obligations Vesting Act and in consideration of the relationship between accounting and taxation. The Interim Report for the parent company has been prepared in accordance with the Swedish Annual Accounts Act.

The accounting policies applied are consistent with those described in the SaltX Group 2020 Annual Report.

NOTES

NOTE 1 SIGNIFICANT ESTIMATES AND ASSESSMENTS FOR ACCOUNTING PURPOSES

The estimates and assumptions that represent a significant risk of material adjustments in the carrying amounts of assets and liabilities are:

- ◆ **Earlier received from the Swedish Energy Agency**
Long-term liabilities consist largely of loans from the Swedish Energy Agency in the amount of TSEK 24,386. The loan is interest-bearing at approximately 6 per cent per year. A request for remission of most of the loan was sent to the Swedish Energy Agency on two occasions but was rejected. The company intends to send a request for a new review to the authority in December 2021.
- ◆ **Intangible assets**
The largest asset recogni-

zed in SaltX's balance sheet is capitalized development expenditure. This is attributable to the basic technology and the large-scale energy storage application, EnerStore. An impairment test of this asset is carried out based on an estimate and assessment of what the group's technology may lead to in the form of future revenue and cash flow. Important components when calculating these future values are volume growth, profit margin and discount rate. A significant change of important components in the calculation may mean that the balance sheet item needs to be adjusted. The cash flows that are discounted for impairment testing are taken from the company's budget and long-term forecast, assuming that sufficient financing can be secured to continue operations in the long term.

- ◆ **Development**
The Group assesses when the product or process is technically and commercially viable and whether the Group has sufficient resources to complete development and subsequently use or sell the intangible asset. If these conditions are met, an intangible asset is recognized in the balance sheet. The expenditures in conjunction with the construction of a new pilot plant with new reactor technology have been capitalized.
- ◆ **Research and promotional measures**
During the period, the Group focused on the application for large-scale energy storage, EnerStore. In addition to the pilot plant mentioned above, the activities have consisted of searching for a more efficient process for charging

and discharging energy from nanocoated salt. In addition, resources have been put into initial sales promotion measures in the form of work on and preparation of pre-commercial plants in conjunction with partners. These activities and efforts are research and sales promotion-oriented activities in nature and are expensed as they arise.

Estimates and assessments are continuously evaluated and are based on historical experience and other factors, including expectations of future events that are considered reasonable under prevailing conditions.

NOTE 2 REVENUE

The Group has In the income statement reported amounts relating to revenue (see the table on the preceding page).

NOTE 3 FINANCIAL INSTRUMENTS

For the Group's borrowing from Almi Företagspartner, the carrying amount of the borrowing corresponds to its fair value, since the interest rate on this borrowing is at parity with current market interest rates. Regarding the loan from the Swedish Energy Agency, the request for a remission of the loan has been

submitted to the Agency on two occasions and has been rejected. The company intends to send a request for a new review to the authority in December 2021.

Regarding the fair value of short-term financial assets and liabilities, the fair value is estimated to correspond to the carrying amount since the discount effect is not material.

NOTE 4 TRANSACTIONS WITH AFFILIATED PARTIES

No transactions have been conducted with affiliated parties in the year, other than the agreed remuneration to the Board of Directors and management.

Auditor's report

SaltX Technology Holding AB (publ), reg. no. 556917-6596

Introduction

We have reviewed the condensed interim financial information (interim report) of SaltX Technology Holding AB (publ) as of 30 September 2021 and the nine-month period then ended. The board of directors and the CEO are responsible for the preparation and presentation of the interim financial information in accordance with IAS 34 and the Swedish Annual Accounts Act. Our responsibility is to express a conclusion on this interim report based on our review.

Scope of Review

We conducted our review in accordance with the International Standard on Review Engagements ISRE 2410, Review of Interim Report Performed by the Independent Auditor of the Entity. A review consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with International Standards on Auditing, ISA, and other generally accepted auditing standards in Sweden. The procedures performed in a review do not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

Conclusion

Based on our review, nothing has come to our attention that causes us to believe that the interim report is not prepared, in all material respects, in accordance with IAS 34 and the Swedish Annual Accounts Act, regarding the Group, and with the Swedish Annual Accounts Act, regarding the Parent Company.

Stockholm, 4 November 2021
